To Whom It May Concern:

Too often in the facility management industry we convey information to our colleagues regarding vendors and/or suppliers that have provided a service that has fallen short of our expectations. As a result, I would like to offer a different type of communication, one of complete support and trust in Synergy Engineering.

Synergy was selected by the district to serve as both engineer and construction support for the recent installation of a new boiler plant at East Kentwood High School. The \$500,000 project was approved by the Board of Education based on a feasibility study done by Synergy that identified several mechanical options to reduce energy consumption. The quality of the report led the district to immediately retain Synergy to design a new boiler plant and serve as construction manager. They were also instrumental in the submittal of an energy conservation grant from the State of Michigan, which resulted in a \$25,000 refund to Kentwood Schools.

After one year of working with Synergy, I can say without hesitation that our assessment of their company was accurate. From the budget development stage to the punch lists, Synergy offers their experience as "your representation. The completion of our boiler plant project was on schedule and within budget. I am confident that Kentwood has retained one of the most talented and dedicated engineers firms in the West Michigan.

I honestly recommend you retain the services of Synergy Engineering. They will serve as a means to the end, a successful project.

Sincerely,

A handwritten signature in black ink, appearing to read 'Todd Bell', with a stylized flourish at the end.
